

The Partners in Flight Awards Program Nomination Guidelines

Award Nominations Due December 15th, 2012

Description

The Partners in Flight awards program recognizes exceptional contributions to the field of landbird conservation. Nominees who have furthered the goal of protecting migratory and resident landbirds and their habitats will be evaluated for their effective public awareness activities, innovative leadership, insightful ecological investigation, or sound land stewardship. Partners in Flight has been recognizing outstanding individuals and groups for their efforts in landbird conservation and management since 1996. A committee evaluates nominations, and awardees are recognized and presented with awards annually at an appropriate national or international conference.

The Selection Process

Partners in Flight takes pride in recognizing outstanding individuals or groups for their efforts. As such, we have assembled an Awards Committee with a broad range of experience and expertise within the bird conservation community. The Awards Chair is responsible for announcing the awards process, soliciting nominations from the birding community, and managing the review and selection of nominees for awards by the committee. The committee members vote individually and make their recommendations to the Chair. Once all votes are compiled, the committee arrives at a consensus for all award winners. The committee reserves the right to reassign a nomination to a different category from which the nomination was originally submitted. To be eligible, projects or activities must have been initiated after 1990.

Leadership: An individual or group that demonstrates outstanding guidance and direction that contributes, or has contributed to, advancing PIF conservation efforts. This award can apply to a range of levels, from individual projects to large programmatic efforts, but should have far-reaching implications at least at the physiographic area level. Examples could include creation of or participation in significant partnerships, demonstration of leadership skills at a regional, national, or international level, or coordinating groups and individuals with diverse interests and expertise to effectively implement bird conservation planning.

Investigations: An individual or group that contributes outstanding research or scientific data that improves our understanding of avian ecology, habitat management, or other scientific factors important to the PIF initiative. Important criteria include the advancement of research or refinement of inventory and monitoring procedures. These efforts should be applicable to regional, national or international conservation efforts, with a focus on priority bird species and habitats.

Public Awareness: Activities by an individual or group that contribute significantly to increasing the public's awareness and appreciation for birds, their habitats, or the need for conservation. Proposals will be judged based on the development of outreach efforts that enlist volunteers and promote public education. Emphasis will be placed on the effectiveness of the nominee to reach beyond the local level to a physiographic area, state, or national level.

Stewardship: An individual or organization that contributes significantly to the management, conservation, or restoration of habitat for landbirds. Important criteria

could include incorporation of a priority habitat in a stewardship program, designation of protected status for a reserve, designation of Important Bird Areas, development and implementation of Bird Conservation Plans, or conservation of significant stopover habitat.

Recognition: Award recipients are presented their awards in front of an audience of their peers. Past ceremonies have been conducted at Partners in Flight International Workshops (e.g., Asilomar, CA, in 2002) and at the North American Wildlife and Natural Resources Conference.
