

THE WASHINGTON BIOLOGISTS' FIELD CLUB:
ITS MEMBERS AND ITS HISTORY (1900-2006)

New book publication

THE WASHINGTON BIOLOGISTS' FIELD CLUB: ITS MEMBERS AND ITS HISTORY (1900-2006)

The 342-page book contains the history of the Washington Biologists' Field Club as well as a short biography of all the past and present members of the Club. Members of the Club conducted research on Plummers Island in the Potomac River and this land is considered the most intensely studied natural area in North America. The cumulative total of 267 members represents all branches of natural science, with a strong emphasis on biology. In addition to the scientists, members have included famous naturalists such as John Burroughs, administrators like Ira Gabrielson, and well-known artists such as Roger Tory Peterson. All members of the Club resided in the Washington, D.C. area while they were members and many continued as nonresident members after leaving the area.

The biographies provide excellent reference material for those interested in many of the biological science leaders during a span of over 100 years and is especially of value to those persons with genealogy interests. The book is profusely illustrated with 542 pictures from 1901 to the present. Many of the pictures are of the two annual social events, Shad Bake in spring and the Oyster Roast in the fall. The book is hard bound with a beautiful color dust jacket.

More information about the Club can be obtained at:
