

Patuxent Science Meeting 2004 Poster Abstract

Game Birds - A FileMaker Utility for Summarized Banding and Encounter Game Bird Data

B.H. Powell and Edward J. (Jerry) McFaul

For over 10 years the Bird Banding Laboratory has provided raw summarized banding and encounter data for all game bird species via ASCII or dBASE files. This new application, written in FileMaker, provides translation of the BBL data, enables the creation of subsets and export of data, and links selected data records to the LandView mapping application via MARPLOT.
