

Patuxent Science Meeting 2004 Poster Abstract

Statistical Analysis of National Park Service Monitoring Data: Recent Activities at the USGS Patuxent Wildlife Research Center

Larissa Bailey , John R. Sauer, James D. Nichols, William A. Kendall, James E. Hines, and Allan O'Connell

The USGS Patuxent Wildlife Research Center has a variety of projects that are relevant to monitoring in national parks. Patuxent research has an important role in:

- Developing new analysis methods for survey data.
- Providing analyses and summary results over the internet.
- Conducting workshops on statistical methods for NPS and other staff.

In this poster, we outline several of these projects.
